

ZEISS Lifecycle Management

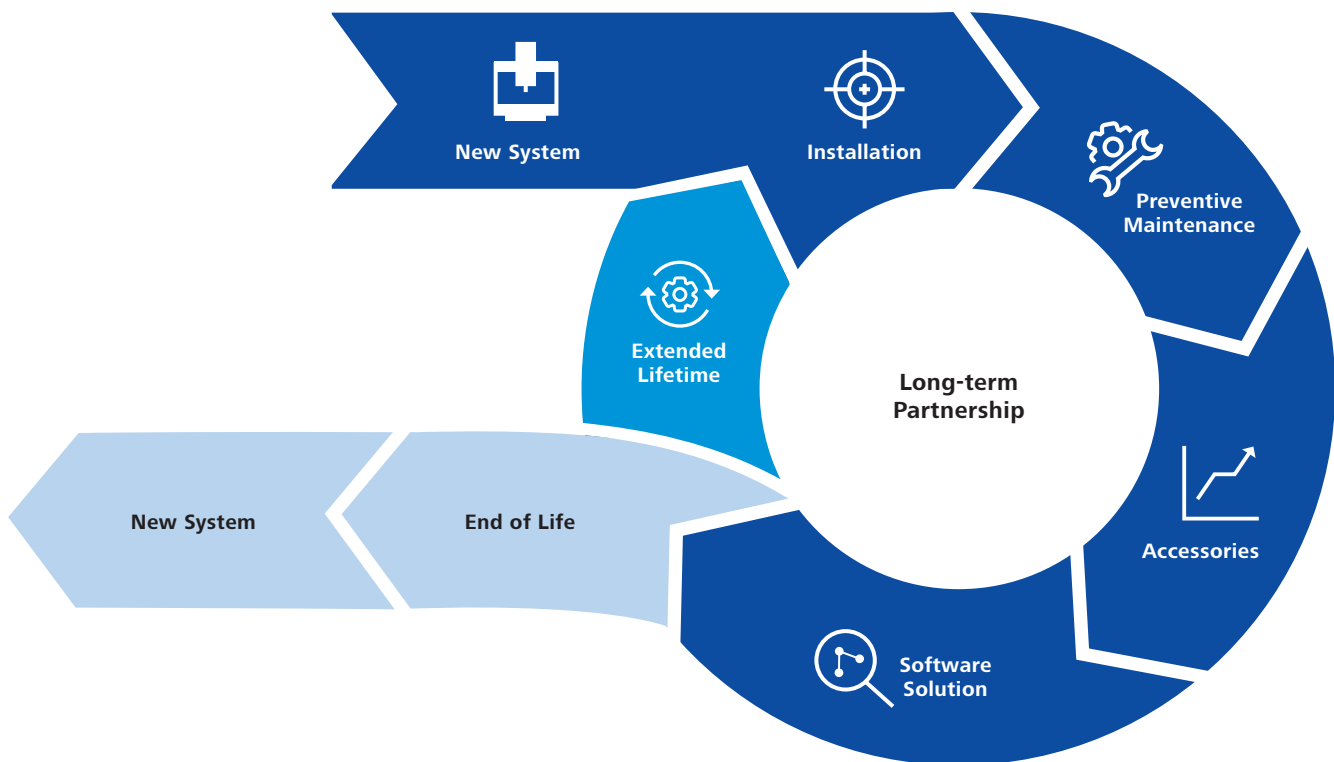

Extending the Lifetime of your CMM

Seeing beyond

Extended Lifetime

Taking a holistic approach to the entire lifecycle of measuring machines, ZEISS ensures reliability and high performance. Among the options we provide are retrofit packages designed to extend the lifetime of your measuring machine. These tailored solutions promote cost efficiency, optimized performance and sustainability.

Why Extended Lifetime?

The development of our measuring machines is driven by innovation and technological progress. Environmental factors and external influences can have a significant impact on the lifetime of your systems. The availability of components, such as electronic boards, can be limited due to supplier discontinuation. To ensure the continued availability of our measuring technology for support and repair, we offer machine-specific retrofit packages to extend the lifetime of your system. These solutions are essential for effective machine maintenance and enhancing the operational efficiency of your production facility. An extended lifetime also helps to conserve resources and reduce emissions, as retrofitting can lead to a decrease in energy consumption.

How can ZEISS support?

ZEISS offers two main options for customers: A new system or a retrofit. Our latest systems offer state-of-the-art technology and enhanced performance. If you are not considering a new **ZEISS System**, we offer the opportunity to extend the lifetime of your existing system. The **ZEISS Retrofit** program provides solutions through the ZEISS FutureFit and ZEISS PerformanceFit products as part of our ZEISS FitFamily concept. We are dedicated to creating a comprehensive support strategy in collaboration with our development team and suppliers to ensure optimal support for years to come. Whether you are investing in a new system or upgrading your existing one, ZEISS is here to support you in managing your challenges.

Choose ZEISS for a long-term partnership, ultimate efficiency, and maximum machine lifetime.
