Built to be a Legend. Performance for Life.

ZEISS Originals
Certified pre-owned systems

zeiss.com/originals
ZEISS has been synonymous with excellent quality for 175 years, and is your reliable partner when it comes to quality assurance in your company. And those same standards of quality apply for our certified pre-owned systems.

Only ZEISS Originals systems, completely refurbished by ZEISS and equipped with the latest software, can give you the certainty and confidence you need in your quality assurance.

Certified ZEISS quality
Systems that have been completely refurbished by ZEISS provide you with absolute assurance that you are investing in a ZEISS solution without skimping on quality. That’s why we only award the ZEISS Originals certificate to used measuring devices that pass the same strict quality inspections that new devices go through.

Guaranteed maintenance
Buying a used measuring device doesn’t mean cutting corners — and that goes for both the quality device itself and for warranty that we as a manufacturer provide for the system. Our refurbished devices come with the warranty you are used to.

A budget-friendly measuring solution
A ZEISS Originals system means first-rate quality, even if you are not the first owner of the device. When you buy a used measuring system, you get the precise measurements you expect — while also sticking to your budget.

Advantages:
- Certified quality: Specially prepared by ZEISS experts, these devices provide you with the confident measurement results you need.
- Secure warranty: Original devices also have the usual ZEISS warranty.
- Budget-friendly solution: Used devices reduce your investment budget and increase your efficiency.

The refurbishment process in detail
1. Assessment
When a used CMM solution arrives at ZEISS, our experts begin by conducting technical and mechanical testing and analysis. This includes meticulously checking all of the used measuring device’s components, as well as carrying out a function test using a range of standardized test scenarios.

2. Replacement of parts
During refurbishment, all parts of the measuring device where tests reveal wear or defects are replaced. This applies, for example, to drive motors, gages, and various wear parts.

3. Technology update
Next, both the hardware and software of the used CMM are updated. The system is retrofitted with the latest technology. These parts (e.g. controls, sensors) are identified before the work is begun.

4. Restoration of areas with visible signs of wear
Measuring devices once used for demonstration are often in pristine condition. But measuring technology that has been used in a company often shows signs of wear. The next step is to give our used devices a full makeover. This includes, for example, repairing the granite plate or restoring the covers.

5. Inspection and certification
After it has been fully refurbished, the measuring system is tested once again in accordance with the ZEISS specifications for new devices. If the refurbished measuring device passes this inspection, it is certified. When purchased, the warranty is applied to the new owner.

6. Final inspection
As soon as the entire process is concluded, the ZEISS Originals CMM can be commissioned by its new owner. ZEISS Originals systems come with a 12-month manufacturer warranty and guaranteed availability of replacement parts for up to 10 years (depending on the device type).
We buy your used equipment
Perhaps you already have a ZEISS system that produces excellent results, but could complete your measuring tasks even more efficiently with new features or new technology. New measuring jobs mean new challenges. If that’s the case, ZEISS can help you stay on the cutting edge – and ZEISS Originals offers you the opportunity to trade in your previous device for a new one.

A replacement that pays off
There is a value to having new measuring technology from ZEISS. With the ZEISS Originals returns program, you can keep the cost of acquiring a new device down without having to miss out on the latest technologies.

A simple replacement process
We want to make it as easy as possible for you to return your used measuring device. All we need to buy back your used measuring equipment is some basic information. Then, depending on the condition of the device, we will make sure it is refurbished or disposed of properly.

We are also happy to help you select your new measuring technology. The replacement process is so streamlined that you won’t experience any delays in your measuring and testing work.
