

ZEISS CALYPSO for Renishaw Equator™

RENISHAW
EQUATOR 500

ZEISS CALYPSO@Renishaw Equator

For a harmonized metrology software landscape

ZEISS CALYPSO measures standard geometries simply, quickly and reliably. Programming is easy by clicking on the desired characteristics.

Thanks to numerous optional extensions the software also offers the right tools for special requirements. In combination with the Renishaw Equator, you get a high performance system that is built on the gold standard.

Run your ZEISS CALYPSO inspection plans flexibly in production environments with fast cycle times and large temperature ranges. Based on a streamlined workflow, always keep the reference to the absolute measurement with your ZEISS CMM.

Benefits for CMM users

Using the same CALYPSO inspection plan for both

- the ZEISS CMM (reference measurement)
- the Renishaw Equator (relative measurement)

Easy handling

- A simplified workflow efficiently integrating ZEISS and Renishaw metrology solutions

Reduce cost

- Eliminate additional programming efforts
- Avoid additional training efforts
- Decrease administrative efforts for additional metrology software

Reduce risk

- Increase measurement process stability
