Make every second count with high-performance OCT.

ZEISS CIRRUS 6000

www.zeiss.com/cirrus6000
High-Performance OCT
Advance your fast-paced practice

CIRRUS® 6000, the next-generation OCT from ZEISS, delivers high-speed image capture with HD imaging detail and a wider field of view, so you can make more informed decisions and spend more time with your patients.

**Performance OCT**
Faster imaging with greater detail, at 100,000 scans per second, for improved patient care.

**Proven analytics**
Comprehensive, clinically-validated tools to diagnose and manage a range of conditions.

**Patient-first design**
Seamless transfer of raw patient data from previous generations of CIRRUS for continuity of patient care.
The power of 100,000 scans per second

**Faster imaging:**
Reduce chair time and speed up your practice.

- 270% faster OCT scans and 43% faster OCTA scans.*
- OCT cube scans in as little as 0.4 seconds.
- High-speed imaging in combination with FastTrac™ eye tracking technology reduces the chance of motion artifacts such as those caused by blinks and saccades.

**Greater detail:**
See deeper instantly, with high-definition widefield imaging.

- 12x12 mm single-shot OCTA cube scan in addition to 8x8, 6x6 and 3x3 mm scans.
- High-Definition AngioPlex scans (8x8 and 6x6 mm) for even greater microvascular detail without limiting the field of view.
- 2.9 mm scan depth.

* Compared to prior generations of CIRRUS.
“The CIRRUS 6000 is all about its speed. With increased speed comes greatly improved resolution and detail on cube, raster and OCTA scans. The new faster CIRRUS enables me to incorporate these more reliable scans into my daily workflow and make important treatment decisions for my patients.”

Theodore Leng, MD, FACS, Byers Eye Institute at Stanford, United States

Performance OCT — faster, wider, with a new level of detail

ZEISS CIRRUS 6000 empowers clinicians with a larger field of view in a single scan, and captures high-definition OCT/OCTA scans that reveal finer details of the retinal microvasculature — all of which provides more insight into the patient’s condition in less time.

Proven analytics
CIRRUS-powered treatment decisions

As the pioneering OCT technology, the CIRRUS platform offers clinicians extensive, clinically-validated applications for retina, glaucoma and anterior segment. The result: precise analysis, faster throughput and smarter decision-making across a wide spectrum of clinical conditions and patient types.

Retina

Macular Change Analysis
The CIRRUS data cube automatically stores and delivers each patient’s historical data to provide a variety of change assessments, including macular thickness change maps that help you understand your patient’s response to treatment. Because every CIRRUS cube is tracked and registered to OCT scans from prior visits using CIRRUS’ FastTrac™ Retinal Tracking Technology, you can confidently measure point-to-point changes in macular thickness.

AngioPlex Metrix OCTA Quantification

AngioPlex® Metrix™ for Macula and ONH
AngioPlex Metrix allows clinicians to objectively assess and track progressive eye diseases such as diabetic retinopathy and glaucoma with quantification tools such as Vessel Density, Perfusion Density, and Foveal Avascular Zone (FAZ) for the macula, and Capillary Flux Index for the optic nerve head.
The CIRRUS suite of glaucoma analysis tools are designed to help you better visualize, detect, and manage all stages of glaucoma, from glaucoma suspects and mild glaucoma to severe glaucoma.

**CIRRUS RNFL thickness deviation maps** have been shown to be superior for detecting localized RNFL defects, compared to traditional peripapillary RNFL thickness measurements.

**Ganglion Cell Analysis** helps identify macular glaucomatous damage, which can be missed with RNFL analysis alone.

**Combined GCL/IPL and RNFL thickness deviation maps** provide a comprehensive widefield assessment.

**AutoCenter™ – ZEISS’ patented algorithm** automatically identifies the optic nerve head using Bruch’s Membrane Opening (BMO) in 3-dimensions for more precise measurement of the neuro-retinal rim, accounting for tilted discs, disruptions to the RPE and other challenging pathology.

**Unique to ZEISS, Guided Progression Analysis™ (GPA™)** provides both trend and event-based analyses that determine if change has occurred that exceeds test-retest variability and quantify rate of change for key RNFL, ONH, and GCL/IPL parameters.

---

**Anterior Segment**

9 mm epithelial thickness map of keratoconus highlights localized epithelial thinning.

9 mm high-definition cornea imaging with semi-automated measurement tools for flap thickness and residual stromal bed.
**Anterior Segment Premier Module**
CIRRUS also enables comprehensive imaging and quantification of the anterior segment for refractive surgery planning and follow-up, corneal evaluation and glaucoma assessment.

ChamberView — A patented 15.5 mm wide view of the entire anterior chamber with objective tools for measuring anterior segment ocular structures.

Wide Angle to Angle Scan - Provides exquisite detail of the iridocorneal angle and includes measurement tools for Angle Opening Distance (AOD500/750) and Trabecular Iris Space Area (TISA500/750) to quantify and track degree of angle closure.

**Patient-first design**
Unique platform designed for the future

With ZEISS CIRRUS 6000, your patient data is never left behind. The CIRRUS platform ensures seamless transfer of raw, dynamic patient data from previous generations of the device – enabling clinicians to maintain continuity of patient care, even as OCT technology evolves over time.
Technical specifications

ZEISS CIRRUS 6000

Key Parameters

Methodology: Spectral domain OCT
Optical source: Superluminescent diode (SLD), 840 nm
A-scan depth: 2.0 - 2.9 mm (in tissue)
Scan speed: 100,000 A-scans per second
Min. pupil diameter: 2.0 mm
Resolution:
- Axial resolution 5 µm (in tissue), 1.95 µm (digital)
- Transverse resolution 12 µm (in tissue)
Refractive error adjustment: -20D to +20D (dopters)
Fundus Imaging:
- Methodology Line Scanning Laser Ophthalmoscopy (LSO)
- Optical Source SLD 750 nm
- Field of View (degrees) 3x6x30

Analytical applications

Retina:
- Macular Thickness Analysis with Reference Database (Diversified and Asian)
- Macular Change Analysis
- Advanced RPE Analysis
- 3D Visualization
- En Face Analysis
- CIRRUS Wellness Exam

Glaucoma:
- Guided Progression Analysis
- Ganglion Cell/IPL Thickness with Reference Database (Diversified and Asian)
- RNFL Thickness with Reference Database (Diversified and Asian)
- ONH Parameters with Reference Database (Diversified and Asian)
- Average cup-to-disc ratio
- Average, Superior and Inferior RNFL Thickness
- CIRRUS Wellness Exam

AngioPlex Metrix OCT Angiography Quantification:
- Macular
- Foveal Avascular Zone
- Perfusion Density (ETDRS grid)
- Vessel Density (ETDRS grid)
- Optic Nerve Head
- Capillary Perfusion Density
- Capillary Flux Index
- AngioPlex 2-visit comparison

Instrument Specifications

Weight: 35 kg (77 lbs) (without monitor)
Dimensions (L x W x H): 62.2 x 42.5 x 29.2 cm (24.4 x 16.7 x 11.4 in) (without monitor)
Input Power:
- Voltage and Mains Frequency 230V, 100/120V, 50-60Hz
- Electrical Class IEC 60601-1 Class I

Computer Specifications

Monitor: 22" Widescreen HD
Resolution: 1920x1080
Internal storage: 2 TB with 128 GB SSD (> 80,000 scans)
USB Ports: minimum 6
Input devices: Wireless keyboard, Wireless mouse
Processor: Intel® Core i7 (7th Gen)
Operating system (Instrument): Windows® 10 Enterprise
Supported operating systems (Review Station): Windows® 10, Windows® 8.1, Windows® 7 (64 bit)
