# FORUM ASSIST match from ZEISS
Version 1.5

Fast identification of patient record inconsistencies

Your challenge

When migrating legacy data from different diagnostic instruments to the data management environment of FORUM®, patient record inconsistencies such as duplicate files may occur. Irregularities such as alternate name spellings or patient IDs should be quickly removed and duplicate records merged. In the first step, the inconsistencies need to be found.

Our FORUM solution

ZEISS FORUM ASSIST match is a highly efficient software tool designed to quickly find duplicate patient records stored in the FORUM Archive. It can save practices a tremendous amount of time, effort and costs in manually locating and eliminating these types of irregularities. After ZEISS FORUM ASSIST match has identified the duplicate records, they can be quickly and easily merged.

ZEISS FORUM ASSIST match

Key benefits

- Rapid identification of inconsistent patient records with thorough and accurate data scans in FORUM

- Simple merging of multiple patient records and duplicates, displayed in an easy-to-understand overview

- Easy migration of instrument legacy data through definition of individual search criteria

Minimum requirements for FORUM ASSIST match from ZEISS

	ZEISS FORUM ASSIST match
