

FORUM from ZEISS

OCT Navigator

Enhanced OCT review

Your challenge

When examining patients coming from referring doctors, you often have to deal with varying diagnostic data e.g. OCT exams originating from devices by different OCT vendors. Electronic review of OCT images and comparison of B-scans from different manufacturers are challenging if not impossible tasks for many ophthalmic practices. Until now.

Our FORUM solution

With the new ZEISS FORUM OCT Navigator you can now visualize and navigate through OCT images from different OCT providers. This means you can not only simultaneously scroll through up to three B-scans by your ZEISS CIRRUS HD-OCT but also through exam data from any other OCT device complying with the DICOM standard. Enhanced usability will ease the review and comparison of examination data over time and will support you to make faster and more confident decisions.

ZEISS FORUM

OCT Navigator

Key benefits

- Synchronously scroll through up to three B-scans from any OCT provider complying with the DICOM standard
- Conveniently choose and review relevant OCT images
- Easily zoom and pan or adjust the brightness and contrast of your fundus images and B-scans for better decision-making
- Comment on an image or mark it as your favorite to find it again quickly
- Automatically scroll through your OCT B-scans via the 'Auto-Play' function and adjust the speed according to your preferences
- Enhanced performance of the OCT imaging workflow

Minimum requirements for FORUM OCT Navigator from ZEISS

Technical requirements The minimum technical requirements for the ZEISS FORUM OCT Navigator are the same as for a PC running a FORUM Archive or Viewer version 4.2.3 (or higher).
